

Mecrowave WebSocket

this module is available with Apache Meerowave $\geq 1.2.11$.

Coordinates:

```
<dependency>
  <groupId>org.apache.meerowave</groupId>
  <artifactId>meerowave-websocket</artifactId>
  <version>${meerowave.version}</version>
</dependency>
```

this module requires `org.apache.tomcat:tomcat-websocket-api` but replaces `org.apache.tomcat:tomcat-websocket` until Tomcat enables a better way to extend its default.

Once this module added, you can implement a server websocket endpoint as a CDI bean, it will use `CDI.current().select(endpointType).get()` to resolve it.

you can still pass a custom `Configurator` to your endpoint to customize the lookup or runtime of the endpoint.
